

Dashboard Checklist

Outstanding work to take the internal operations dashboard to a fully functional production system.

Generated: 2026-05-09

Current state

This document captures every workstream still required to take the Altun Logistics internal dashboard from prototype state to a fully functional production system.

The dashboard currently runs on:

- Static mock data in `src/data/dashboard/*`
- An async service layer in `src/lib/dashboard/api/*` that simulates network latency
- Local state for theme (dark mode) and language preference
- Demo alerts on most write actions (no real persistence)
- No authentication or role-based access

Items are grouped by domain. Priority labels: Critical (blocks production), High (needed for full functionality), Medium (improves quality), Low (nice-to-have / polish).

Summary

Total sections	26
Total items	162
Critical sections	2
High-priority sections	11
Medium-priority sections	9
Low-priority sections	4

1. Backend & Persistence

Priority: Critical

- %j Replace mock service layer in `src/lib/dashboard/api/*` with real backend (Supabase recommended)
- %j Provision Postgres schema for: users/profiles, customers, shipments, shipment_events, quotes, quote_requests, customs_files, customs_documents, warehouse_zones, handling_jobs, team_tasks, automation_workflows, automation_runs, email_drafts, notifications, audit_logs, dashboard_settings
- %j Wire CRUD endpoints (read paths first, then mutations)
- %j Persist user/org-level settings (notifications, document workflow, dark mode optional)
- %j Replace `useAsyncData` with `@tanstack/react-query` (already in dependencies) for caching + revalidation
- %j Migrate static fixtures in `src/data/dashboard/*` to seed data

2. Authentication & Authorization

Priority: Critical

- %j Login / logout flow (Supabase Auth or equivalent)
- %j Session management + refresh tokens
- %j Role-based access: admin, ceo, operations, customs, sales, warehouse, viewer
- %j Route guards via TanStack Router beforeLoad !' redirect to /login when unauthenticated
- %j Row Level Security (RLS) policies per role
- %j Password reset flow
- %j Optional: SSO / OAuth providers

3. Forms (currently demo alerts)

Priority: High

- %j New shipment form (replace alert on /dashboard/shipments)
 - %j Add customer form (/dashboard/customers)
 - %j New customs file form (/dashboard/customs)
 - %j Schedule handling job form (/dashboard/warehouse)
 - %j Invite team member flow (/dashboard/team)
 - %j New quote form (/dashboard/quotes)
 - %j Edit existing records — every detail panel needs an edit mode
 - %j Validation: zod schemas matching API input types in lib/dashboard/api/types.ts
 - %j Optimistic UI updates after mutations
-

4. Internationalization (i18n)

Priority: High

- %j Wire up real translation provider (e.g. i18next, linguist, paraglide)
 - %j Translate dashboard copy to EN / NL / TR
 - %j Date / number / currency formatting per locale
 - %j Locale-aware sorting in tables
 - %j Coordinate with public-website i18n pass at end of project
 - %j Hook current useLanguage() in src/lib/dashboard/language.ts to translation provider
-

5. Search

Priority: High

- %j Replace topbar mock search with backend full-text search (Postgres trigram, Elasticsearch, or Meilisearch)
 - %j Keyboard nav: !/!" to move, Enter to select
 - %j Debounce input
 - %j URL-driven query state for shareable searches
 - %j Recent searches per user
 - %j Scope filters (shipments only, customers only, etc.)
-

6. Notifications

Priority: High

- %j Bell dropdown panel with read/unread state
 - %j Real-time delivery via WebSocket / SSE / Supabase Realtime
 - %j Browser push notifications (with user consent)
 - %j Email digest delivery (daily ops digest, customs SLA alerts, ETA shifts, quote events, capacity warnings)
 - %j Per-user mute / DND windows
-

7. Automation Center (real engine)

Priority: High

- %j Server-side workflow execution engine
- %j Document Completeness Check: OCR + classifier on uploaded customs docs
- %j Delay Risk Detection: trained model + carrier ETA feeds + port congestion data
- %j Email Response Assistant: server-side LLM gateway + inbound email parser + draft queue
- %j Daily Operations Summary: scheduled cron job !' email + dashboard digest

- %j Task Automation Rules: persisted rule engine evaluating real events
 - %j Per-run audit log (input snapshot + output) for compliance review
 - %j Editable rule conditions UI (currently view-only table)
 - %j Workflow enable / disable / pause persistence
-

8. Email Integration

Priority: High

- %j Outbound email gateway (SES / Postmark / Resend / SendGrid)
 - %j Inbound email parsing pipeline !' triggers Email Response Assistant
 - %j Email template management UI
 - %j Send-later queue with cancellation
 - %j Bounce / complaint handling
 - %j Email signature configuration
-

9. File Storage

Priority: Medium

- %j Customs document upload (Supabase Storage / S3)
 - %j Quote attachments
 - %j In-app file preview (PDF, images)
 - %j Virus scanning on upload
 - %j Signed download URLs with expiry
 - %j File version history
-

10. Real-time Updates

Priority: Medium

- %j Live activity feed (Recent Automation Activity) via Realtime subscriptions
 - %j Concurrent edit detection (last-write-wins or CRDT)
 - %j Live shipment status changes pushed to all connected clients
 - %j Presence indicators (who else is viewing this record)
-

11. Reports

Priority: Medium

- %j Real PDF / CSV export (replace mock URL in exportReport)
 - %j Date range picker
 - %j Scheduled report delivery (weekly / monthly digest)
 - %j Custom report builder (drag-and-drop fields)
 - %j Saved report templates per user
 - %j Connect finance system to replace placeholder revenue chart
-

12. Charts & Visuals

Priority: Low

- %j Evaluate replacing inline SVG with Recharts (already installed) when data scale grows
 - %j Tooltips with formatted values
 - %j Hover highlight + click-through to detail
 - %j Axis labels and grid lines for line/bar charts
 - %j Verify chart colors readable in dark mode
 - %j Export chart as PNG / SVG
-

13. Quote Flow

Priority: High

- %i Save quote drafts (currently in-memory only)
 - %i Generate and send quote PDF to customer
 - %i Customer-facing quote acceptance link (signed URL)
 - %i Quote !' shipment conversion (one-click)
 - %i Pricing engine: rate cards per route / container / Incoterm
 - %i Approval workflow with manager sign-off above threshold
 - %i Quote revision history
-

14. Shipment Lifecycle

Priority: High

- %i Track every stage with timestamps in shipment_events
 - %i Carrier integration: vessel ETA feeds, container tracking APIs
 - %i Automatic customer notifications on status changes
 - %i Document attachments per stage
 - %i Map view of in-transit shipments
 - %i Cross-trade tracking (third-country routing)
-

15. Customs

Priority: High

- %i Belgian PLDA integration (electronic customs declaration)
 - %i EU NCTS (transit) integration
 - %i Document validity checks (expiry, signature)
 - %i HS code lookup with description hints
 - %i Customs broker workflow + handover flag
 - %i Auto-detection of missing documents per declaration type
-

16. Warehouse

Priority: Medium

- %i Real zone capacity tracking (live pallet count)
 - %i Handling job scheduling with conflict detection
 - %i Forklift / staff assignment + availability calendar
 - %i Inventory tracking with barcode scanning
 - %i Cross-dock window optimisation
 - %i Reefer temperature monitoring per zone
-

17. Team & Tasks

Priority: Medium

- %i Real user invitations (email + accept link)
 - %i Role assignment UI
 - %i Workload calculations from real assigned shipments + tasks
 - %i Time-off / shifts management
 - %i Task comments + @mentions
 - %i Task templates (recurring weekly checks)
-

18. Settings

Priority: Medium

- %j Real persistence of all toggles (currently in-memory mock)
 - %j Differentiate user preferences vs organisation-wide preferences
 - %j API key management for integrations
 - %j Webhook configuration UI
 - %j Company logo / branding upload
 - %j Working hours + timezone configuration
-

19. Audit & Compliance

Priority: High

- %j Audit log table populated on every mutation (who / when / what / before / after)
 - %j Audit log viewer (admin-only route)
 - %j GDPR data export per customer
 - %j GDPR right-to-be-forgotten flow
 - %j SOC 2 / ISO 27001 prep if Altun pursues compliance
 - %j Backup + restore policy documented
-

20. Performance & Production

Priority: High

- %j CI/CD pipeline (GitHub Actions or equivalent)
 - %j Production hosting (Cloudflare Workers — wrangler.jsonc already configured)
 - %j Environment variable management (.env.example placeholders !' real secrets store)
 - %j Error tracking (Sentry)
 - %j Performance budget + Lighthouse CI
 - %j Caching strategy (HTTP cache + react-query)
 - %j Image optimisation pipeline
 - %j Bundle size monitoring
 - %j Database connection pooling at the edge
-

21. Accessibility

Priority: Medium

- %j Add focus trap to drawer (Automation Center, Quote detail) — currently missing, flagged as prototype limitation
 - %j Skip-to-content link in dashboard layout
 - %j Full screen-reader sweep across every route
 - %j Keyboard nav audit (Tab order, arrow keys in tables)
 - %j Color contrast audit — especially in new dark mode tokens
 - %j Reduced-motion support (prefers-reduced-motion: reduce)
 - %j Touch target size audit (44x44 minimum)
-

22. Mobile UX

Priority: Medium

- %j Bottom action bar for primary CTAs on small screens
- %j Sticky filter bar on long tables
- %j Swipe-to-dismiss on drawer (left swipe close)

- %j Pull-to-refresh on data lists
 - %j Offline-friendly read-only fallback
-

23. Testing

Priority: Medium

- %j Unit tests with Vitest (utils, hooks, services)
 - %j E2E tests with Playwright (critical paths: login, new quote, shipment lifecycle)
 - %j Visual regression (Chromatic or Percy)
 - %j Cross-browser smoke tests (Chrome, Edge, Safari, Firefox)
 - %j Mobile device testing matrix
 - %j Load testing (1000+ shipments, large quote table)
-

24. Documentation

Priority: Low

- %j Internal user guide for staff (operations, customs, sales)
 - %j API documentation (when backend lands) — OpenAPI / Postman
 - %j Onboarding flow for new dashboard users (guided tour)
 - %j Help center / inline tooltips
 - %j Runbook for incident response
-

25. Polish & Quality

Priority: Low

- %j Resolve 11 pre-existing fast-refresh ESLint warnings on shadcn ui files (move helpers to separate files)
 - %j Loading skeleton system (currently simple text 'Loading...')
 - %j Improve error boundary copy + retry UX
 - %j Empty states with helpful illustrations + suggested next actions
 - %j Refine dark-mode chart colors if any contrast issues surface
 - %j Animation tuning (reduce or unify durations)
-

26. Miscellaneous

Priority: Low

- %j Favicons + app icons (full set: 16, 32, 180, 192, 512)
- %j PWA manifest if offline / installable mode is wanted
- %j robots / sitemap (currently noindex on dashboard — keep)
- %j Verify SSR error wrapper still surfaces correct errors after backend wiring
- %j Replace Plus + 'New ...' buttons with consistent variant naming once forms exist
